Flite is a beam-type seating system designed for public areas such as airport, stations, malls and museums.

Flite are available in two-, three-, four- or more seats according to requirement.

The seats are moulded in Integral Polyurethane over a steel frame to combine soft feel and durability. These are mounted on a rectangular steel beam which allows long runs of seating, with or without intermediate arms.

Design details are carefully thought out such as hidden screws from view.

Seat rows can be linked together via a swivel joint at any angle with the round table positioned on top of it.

Side table can also be fitted to the end of runs or in between individual seats.

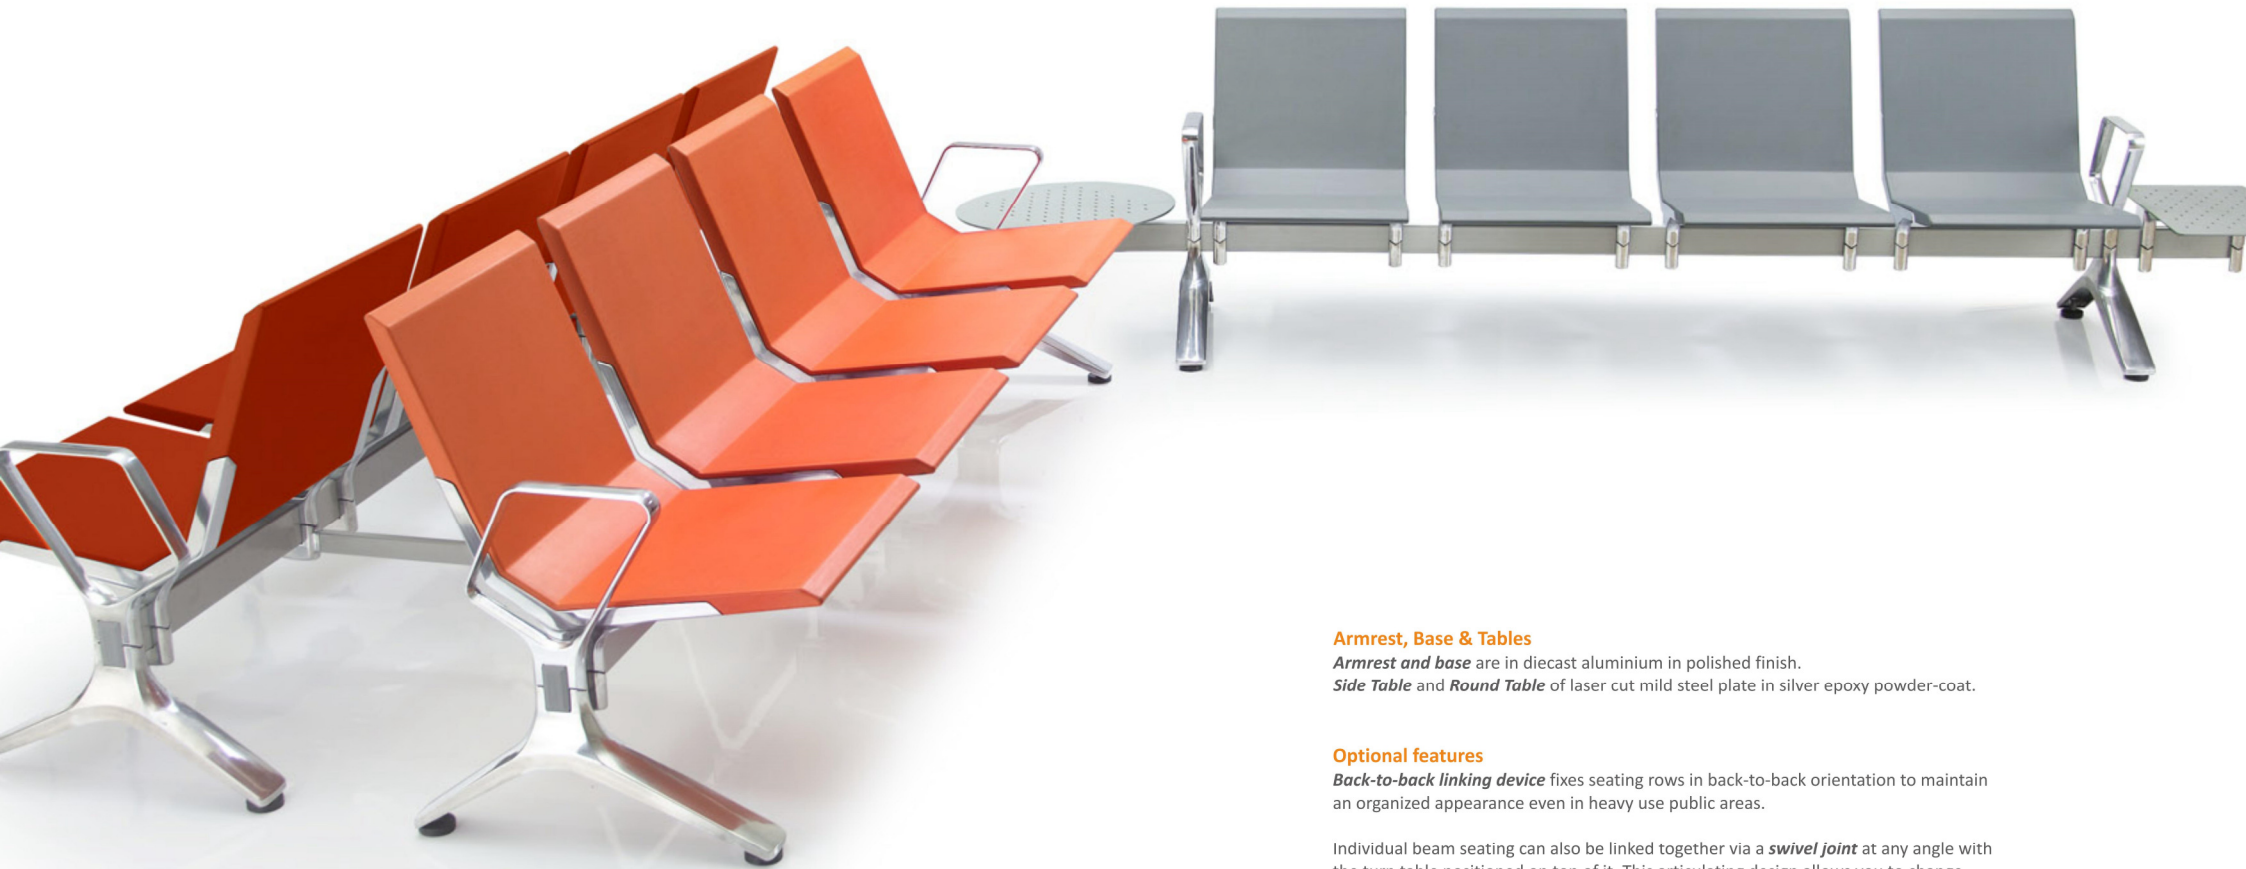

COMFORT. Seat of moulded Integral Polyurethane over steel frame gives a soft-touch apart from its comfort while seating on it.

LOW MAINTENANCE. The seat has a straight angular line design that avoids having recesses that might trap dirt, to make cleaning easier.

Seat of moulded Integral Polyurethane offering resistance to unavoidable spills of water, coffee or other liquids. Wipes dry instantly and does not stain permanently. Definitely much easier to maintain than fabric upholstery.

Worn out seat pads can be **easily replaced** on site, using a common tool by a single operator.

Diecast aluminum frame adds a classy premium appearance, while providing robust strength for heavy public use.

Armrest, Base & Tables

Armrest and base are in diecast aluminium in polished finish.

Side Table and *Round Table* of laser cut mild steel plate in silver epoxy powder-coat.

Optional features

Back-to-back linking device fixes seating rows in back-to-back orientation to maintain an organized appearance even in heavy use public areas.

Individual beam seating can also be linked together via a *swivel joint* at any angle with the turn table positioned on top of it. This articulating design allows you to change any orientations at any time, any places as you like.

Flite Beam Seating Specifications

Seats available in 2-, 3-, 4-, and 6-seaters. Seats are moulded Integral PU foam over steel frame in standard grey colour.

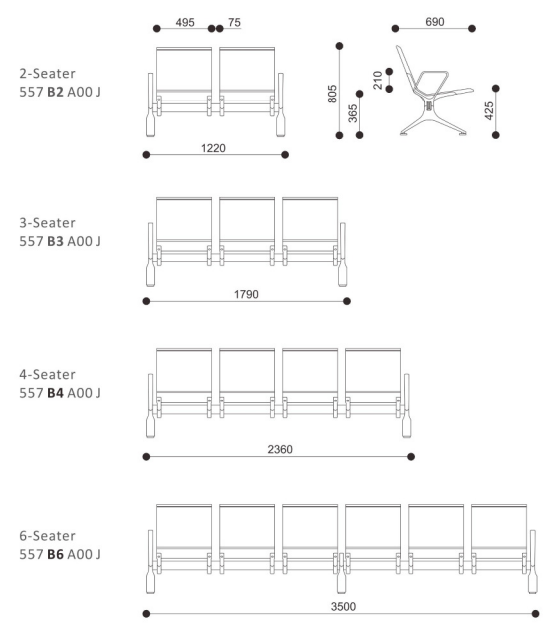

Seat Supporter of diecast aluminum in polished finish. (100% recyclable)
